

Features

- Universal input 90~305VAC (277VAC available)
- · All-in-one function with Power supply, DC-UPS, battery charger and status monitoring in ONE compact unit
- Signal and alarms design meet UL2524,NFPA 1221,BS EN/EN54-4
 Alarm system and GB17945 requirement, with adjustable parameters configurable • Uninterruptible DC-UPS system, by communication interface
- Form C relay contacts and LED indicators for AC Fail, Battery Low, Charger Fail, and DC-OK
- Load-dependent high speed battery charging
- Built-in MODBus or CANBus protocol
- Protections: Short circuit / Overload / Over voltage / Over temperature(auto derating) / Battery reverse polarity (No damage) / Battery cut off
- Battery low protection / Battery reverse polarity protection
- -30 ~ +70°C wide operating temperature
- · Cooling by free air convection
- Can be installed on DIN rail TS-35/7.5 or 15
- Charging curve can be set with SBP-001(only for CANBus model) (Smart programmer sold separately, please refer to: https://www.meanwell.com/webapp/product/search.aspx?prod=SBP-001)
- 20~100% charging current adjustable by VR
- 2 or 3-stage selectable by DIP S.W
- · Suitable for lead acid and lithium-ion batteries
- 3 years warranty

Description

DRS-480 is a 480W AC/DC DIN rail type security power supply series. In addition to the primary output, there is an additional charger circuit that will automatically adjust charge current depending on the primary output current. DRS-480 accepts the universal input between 90VAC and 305VAC, and supports output 24VDC, 36VDC, and 48VDC nominal systems. With high efficiency up to 93.5%, it can operate with free air convection cooling under -30°C through 70°C ambient temperature. In addition to the key protection features such as overload protection, over voltage protection, battery low voltage disconnect, and battery reverse polarity protection, the DRS-480 also provides Form-C contacts and LED indicator alarm signals for AC-fail, battery low, charger fail, and DC-OK to allow easy integration into security systems that comply with local alarm codes.

NOTE	 All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Variable with charger voltage when battery is connected. This is Mean Well's suggested range. Please consult your battery manufacturer for their suggestions about maximum charging current limitation. If load current increases, the system will prioritize load current demand and automatically reduce the battery charging current. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1 μ F & 47 μ F parallel capacitor. Tolerance: includes set up tolerance, line regulation and load regulation. Length of setup time is measured at cold first start. Turning ON/OFF the power supply may lead to increase of the setup time. 						ximum charging current limitation. arging current. & 47 µ F parallel capacitor. the setup time. operating altitude higher than 2000m(6500 when loaded permanently with full power. nt must be re-confirmed that it still meets

■ Function manual

1. Alarm signals

- (1) Alarm Signal is sent out through "AC fail " & " Battery low " & " Charger fail "pins via relay contact.
- (2) An external voltage source is required for this function. The maximum applied voltage is 30Vdc and the maximum sink current is 1A. Please refer to Fig 1.2.
- (3) Table 1.1 explains the alarm function built in the power supply

INPUT	AC fail		DC OK		Battery low/Abnormal /Disconnected		Charger fail	
	2-3	1-3	5-6	4-6	8-9	7-9	11-12	10-12
AC only	closed	open	closed	open	open	closed		
AC + BAT.	closed	open	closed	open	closed	open		
BAT. only	open	closed	closed	open	closed	open		
Low BAT. (<30% capacity)					open	closed		
Charger Fail							open	closed

Table 1.1 Explanation of alarm signal

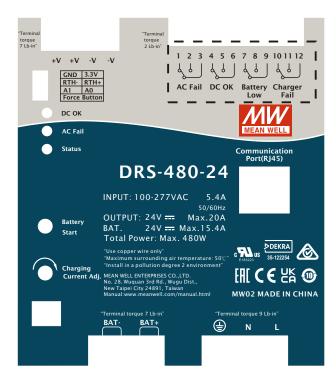

Fig 1.1 alarm signal Terminals

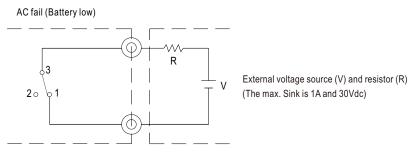

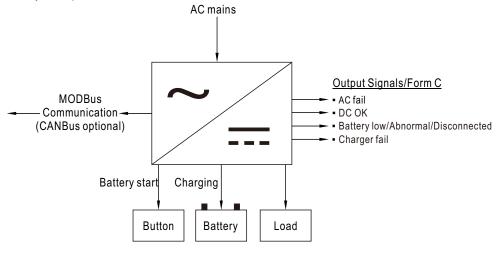

Fig 1.2 Internal circuit of AC fail (Battery low), via relay contact

2.DC-UPS function

When AC mains drops below:79~89VAC of 120VAC,132~187VAC of 220VAC, UPS function will activate and power source switch battery backup.

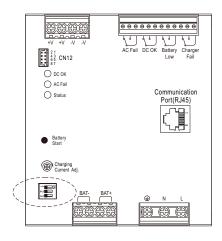

3. Charger setting

3.1.1 2 or 3-stage selectable by DIP S.W

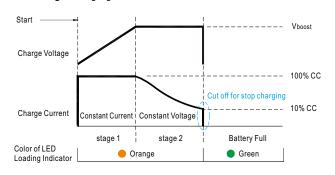

※ This series provides 2 or 3 stage charging curve.

1		
	1	OFF: 3 stage(Default), ON: 2 stage
	2	Charging curve adjustable:see below
	3	Charging curve adjustable.see below

3.1.2 Charging curve can be adjustable by DIP S.W

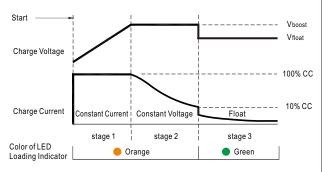

© 2 stage charging curve

State	DRS-480-24	DRS-480-36	DRS-480-48
Constant Current	15.4A	10.2A	7.7A
Vboost	28.8V	43.2V	57.6V

© Suitable for lead-acid batteries (flooded, Gel and AGM) and Li-ion batteries (lithium iron and lithium manganese).

Default 3 stage charging curve

State	DRS-480-24	DRS-480-36□	DRS-480-48
Constant Current	15.4A	10.2A	7.7A
Vboost	28.8V	43.2V	57.6V
Vfloat	27.6V	41.4V	55.2V

 Suitable for lead-acid batteries (flooded, Gel and AGM) and Li-ion batteries (lithium iron and lithium manganese).

** The default curve is programmable, whereas other pre-defined curves can be activated by the means of the DIP S.W; please refer to the table below and the Mechanical Specification.

SBP-001 is a programmer, particularly for MEAN WELL's various programmable battery charger models to program the parameters of charging curves, such as the <u>Constant current (CC)</u>, <u>tapper current(TC)</u>, <u>Constant voltage (CV)</u>, <u>float voltage (FV)</u> and so on, to accommodate the diversified battery specification in industry. With the design accounting for simplicity and convenience, users can easily configure MEAN WELL's programmable battery chargers with SBP-001 programmer and the computer; all of the setups are able to be finished easily by the means of the specific software.

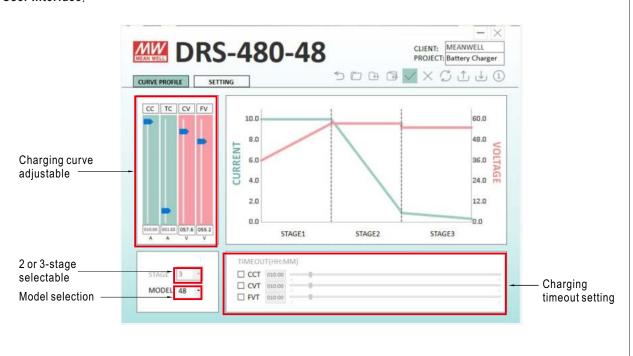

Note:(1) Tapper current(TC) default is 10%, can be fine tuned from 2% to 30% by SBP-001 with computer or CANBus Interface.

- (2) The SBP-001 only supports CANBus version(DRS-480-xxCAN).
- (3) Please contact MEAN WELL for more details.

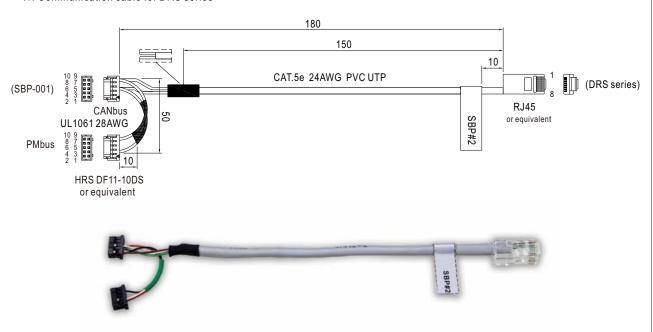

X User Interface:

X Communication cable for DRS series

DRS series pin assigment:

Connector	Pin Assigment									
SBP-001 10pin connector (Connector part No.:HRS DF11-10DS)	1	2	3	4	5 (CANH)	6 (CANL)	7	8	9	10 (GND)
DRS-480 RJ45 Communication port					6	7				8
Wire color					Green	White/Brown				Brown

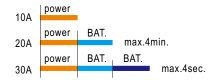

3.3 Communication interface

Charging parameters can be modified by MODBus (DRS-480-xx) or CANBus(DRS-480-xxCAN) communication commands. For details, please refer to: http://www.meanwell.com/manual.html

4. Power Boost Mode

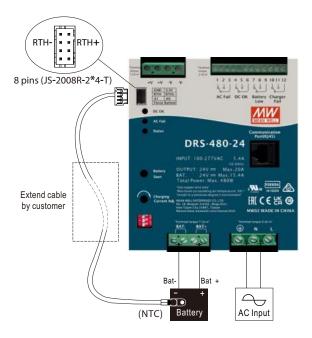

The maximum current on the load output is the 2 times the rated current for 4 minutes max. and 3 times the rated current for 4 seconds max. For example (48V model):

Output load

5.Battery temperature compensation

- © To exploit the temperature compensation function, please attach the temperature sensor(NTC) which is enclosed with DRS-480, to the battery or the battery's vicinity.
- © DRS-480 is able to work normally without the temperature sensor(NTC).
- 5.1 The compensation parameters included Disable, -3, -4 and -5mV/ °C /Cell .It can be modified by communication command of CANBus, MODBus. The factory default value is -3mV/ °C /Cell.
- 5.2 It will be regarded as normal temperature and will not be compensated when temperature compensation resistance is not connected; And temperature compensation will only compensate lead-acid battery, not lithium iron battery.
- 5.3 The range of temperature compensation is 0-40°C , normal temperature 25°C is the central value, no compensation; When the temperature is < 0 °C or > 40 °C , the current temperature compensation value will be limited to 0 °C or 40°C .

24V model as an example

Assuming that $V_{\text{boost}} = 28.8\text{V}$, temperature compensation set to -5mV/°C/Cell by communication, TEMP_bat is NTC temperature detection.

The compensating voltage can be calculated by the following equation:

 $V_{\tiny boost_comp}$ =28.8V-5mV*(TEMP_bat -25 $^{\circ}$ C)*12CeII

Max. compensation voltage:

 $V_{boost.H}$ =28.8V-5mV*(0°C-25°C)*12CeII=30.3V

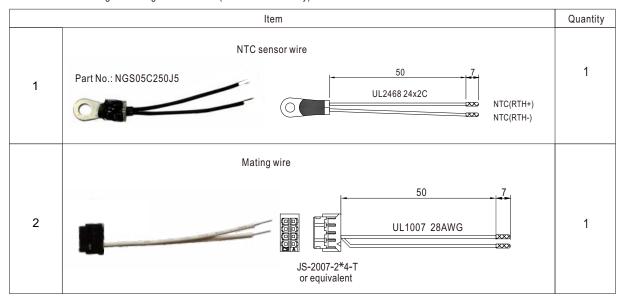

Min. compensation voltage:

 $V_{boost,L}$ =28.8V-5mV*(40°C-25°C)*12CeII=27.9V

5.4 Accessory List

※ NTC Sensor and mating wire along with DRS-480 (Standard accessory)

6.LED alarm

Fı	unction	Description	Output of alarm

		Timeout	Red: 7 Blink/Pause 🔆 🎹 📗		

■ Suggested Application

1.Backup connection for AC interruption

(1) Please refer to Fig2.1 for suggested connection.

The power supply charges the battery and provides energy to the load at the same time when AC mains is OK. The battery starts to supply power to the load when AC mains fails.

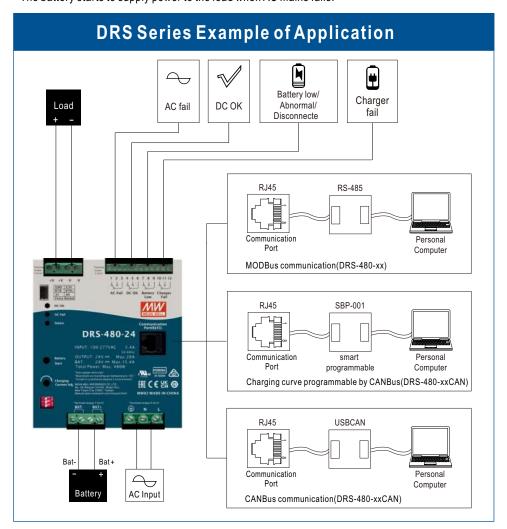

Fig 2.1 Suggested system connection

(2) Backup time

Backup time depends on:

- from the load current
- X from the size of the batteries.

The following table is an example (battery capacity at C10 discharge rate).

_					
Battery Load	10AH	20AH	50AH	100AH	200AH
1.5A	350min	13h	33h	67h	133h
3A	125min	350min	17h	33h	67h
5A	60min	180min	600min	20h	40h
7.5A	35min	90min	350min	13h	27h
10A	23min	60min	240min	10h	20h
15A	13min	35min	125min	350min	13h
