

Dimension

L * W * H

278 * 177.8 * 63.5(2U) mm

10.9 * 7 * 2.5 (2U) inch

Features

- · AC input 180~264VAC
- · Built-in active PFC function
- High efficiency up to 91.5%
- · Forced air cooling by built-in DC fan
- · Output voltage programmable
- Active current sharing up to 9000W (2+1)
- Built-in remote ON-OFF control / remote sense / auxiliary power / power OK signal
- Protections: Short circuit / Overload / Over voltage / Over temperature
- · Optional conformal coating
- 5 years warranty

Applications

- · Factory control or automation apparatus
- Test and measurement instrument
- · Laser related machine
- · Burn-in facility
- · Digital broadcasting
- RF application

■ Description

RSP-3000 is a 3KW single output enclosed type AC/DC power supply. This series operates for 180~264VAC input voltage and offers the models with the DC output mostly demanded from the industry. Each model is cooled by the built-in fan with fan speed control, working for the temperature up to 70°C. Moreover, RSP-3000 provides vast design flexibility by equipping various built-in functions such as the output programming, active current sharing, remote ON-OFF control, auxiliary power, etc.

■ Model Encoding / Order Information

SPECIFICATION

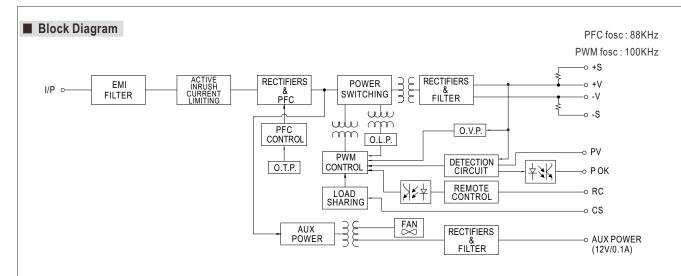

MODEL		RSP-3000-12 RS	SP-3000-24	RSP-3000-48

- 4. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 720mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies."

 (as available on https://www.meanwell.com//Upload/PDF/EMI_statement_en.pdf)

 5. The ambient temperature derating of 3.5°C/1000m with fanless models and of 5°C/1000m with fan models for operating altitude higher than 2000m(6500ft).
- ** Product Liability Disclaimer: For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

AMBIENT TEMPERATURE (°C)

■ Efficiency vs Load (48V Model)

※ The curve above is measured at 230VAC.

■ Function Manual

1. Remote Sense

 $\frak{\%}$ The Remote Sense compensates voltage drop on the load wiring up to 0.25V

X Caution: The power supply, by factory default(also the assumption for other sections), is shipped with, -S & -V on CN2, as well as +S & +V, shorted by connector. When activating the Remote Sense, the +S signal should be connected to the positive terminal of the load whereas -S signal to the negative terminal of the load.

2. Output Voltage Programming / remote adjust / margin programming / dynamic voltage trim)

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 20∼110%(Typ.) of the nominal voltage by applying EXTERNAL VOLTAGE.

O Connecting an external DC source between PV & -S on CN2, and +S & +V, -S & -V also need to be connected.

O Please do not adopt PWM signal as the EXTERNAL VOLTAGE.

- The rated current should change with the Output Voltage Programming accordingly.
- - (2) PV(PIN3) and PS(PIN4) of CN1 or CN2 must be disconnected if "Output Voltage Programming" function is used; otherwise, the internal electrical components may be damaged, and the power supply unit may thus be out of order.

3.Remote ON-OFF

* Remote ON-OFF is activated by the configuration with respect to CN1,CN2 and CN3 as shown in the following diagram.

Example 3.2(A): Using external voltage source

Example 3.2(B): Using internal 12V auxiliary output

Example 3.2(C): Using internal 12V auxiliary output

O Connection Method

		Example 3.2(A)	Example 3.2(B)	Example 3.2(C)
SW Logic	Power supply output ON	SW Open	SW Open	SW Close
3W Logic	Power supply output OFF	SW Close	SW Close	SW Open

4. Alarm Signal Output

X Alarm signal is sent out through "P OK" & "P OK GND" and P OK2 & P OK GND2 pins on CN3. Please acknowledge an external voltage source is required for this function.

Function	Description	Output of alarm(P OK, Relay Contact)	Output of alarm(P OK2, TTL Signal)
D OK	The signal is "Low" when the power supply is above 80% of the rated output voltage, or, say, Power OK	Low (0.5V max at 500mA)	Low (0.5V max at 10mA)
POK	The signal turns to be "High" when the power supply is under 80% of the rated output voltage, or, say, Power Fail	High or open (External applied voltage, 500mA max.)	High or open (External applied voltage, 10mA max.)

Table 3.1 Explanation of alarm

Fig. 4.2 Internal circuit of P OK (Relay, total is 10W)

Fig. 4.3 Internal circuit of P OK2 (Open collector method)

5. Select Overload Protection Type

(1)Insert the shorting connector on CN3 that is shown in Fig 5.2, the Overload Protection Type will be "constant current limiting with delay shutdown after 5 seconds, re-power on to recover". This is the factory default.

(2)Remove the shorting connector on CN3 that is shown in Fig 5.1, the Overload Protection Type will be "continuous constant current limiting".

Fig. 5.1 Insert the CN3

Overload Protection Type: constant current limiting with delay shutdown after 5 seconds

Fig. 5.2 Remove the CN3

Overload Protection Type: constant current limiting

6. Current Sharing with Remote Sense

RSP-3000 has the built-in active current sharing function and can be connected in parallel, up to 3 units, to provide higher output power as exhibited below:

- X Difference of output voltages among parallel units should be less than 0.2V.
- ** The total output current must not exceed the value determined by the following equation: Maximum output current at parallel operation=(Rated current per unit) × (Number of unit) × 0.9
- When the total output current is less than 3% of the total rated current, or say (3% of Rated current per unit)
 ★ (Number of unit) the current shared among units may not be fully balanced.

- O+S,-S and CS on CN1 or CN2are connected mutually in parallel.
- O Under parallel operation, the "output voltage programming" function is not available.

7. Three Phase Connect

Users can exploit three units of RSP-3000(unit 1 , unit 2, unit 3) to work with 3 ψ power system. Please refer to following diagrams for configuration.

I FIG. A: 3ψ 3W 220VAC SYSTEM

\blacksquare FIG. B: 3 ψ 4W 220/380VAC SYSTEM

FIG. C: $3 \psi 4W 190/110VAC SYSTEM$
